Repair Damaged Photos Class Overview

Whether your photo has been torn, is faded from age or has been damaged by a crack or spots this class will teach you how to restore them. We will be using a scanner to create a digital replica of the damaged photo so there will be no further changes to it. There is absolutely no risk to the original photo. Bring several photos to class. You can bring the photograph or one that you have already scanned and saved to a flash drive.

Using Photo Explosion[®], we will repair old, torn and faded photos. Recreate a photo by removing unwanted elements or replacing missing parts.

The photo below is from an album circa 1900 that was left on a sun porch and book worms had a feast. The trainee scanned the original on the left and the end result after using the techniques and assets of the program the final result was beautiful.

Bring a Flash Drive to save class projects unless you are bringing a laptop to class that has Photo Explosion on it.
